

IHS SPECTRUM 2011

EHS & Sustainability Software User Conference

*Bringing Together the Best
To Enable Your Success*

Sunday May 15 – Thursday May 19, 2011

Hilton Austin • Austin, Texas USA

IHS SPECTRUM 2011

This EHS & Sustainability Software User Conference is Bringing Together the Best to Enable Your Success

- Best Software** – The established leaders in each area of our growing market space::
 - *Compliance Suite*[®]
 - *Comply Plus*[®]
 - *DolphinRTK*[®]
 - *ecoAsset Manager*[™]
 - *Essential Suite*[®]
 - *IMPACT ERM*[®]
 - *opsInfo*[™]
 - *Product Compliance*[™]

- Best Content** – IHS is a billion-dollar business, founded more than 50 years ago, and built primarily on the collection, processing and delivery of timely, high-quality information.

- Best Experts** – We work closely with the premier EHS&S information technology and service providers as well as having the broadest, deepest team of in-house experts.

- Best User Community** – The largest in the industry by far – representing senior executives and hands-on end users from organizations large and small, public and private, around the world.

*** Registration Desk Opens Sunday May 15th at 10 am ***

Networking with Your Peers

IHS SPECTRUM 2011 is a unique opportunity for professional networking with other leading EHS and sustainability professionals from a variety of industries and regions. In an era when many of us are choosing our business travel priorities carefully, hundreds of your peers are making participation at this global conference a top priority. Join them, and us, for a variety of enjoyable social events.

Welcome Reception

Sunday May 15th
5:00-7:00 pm

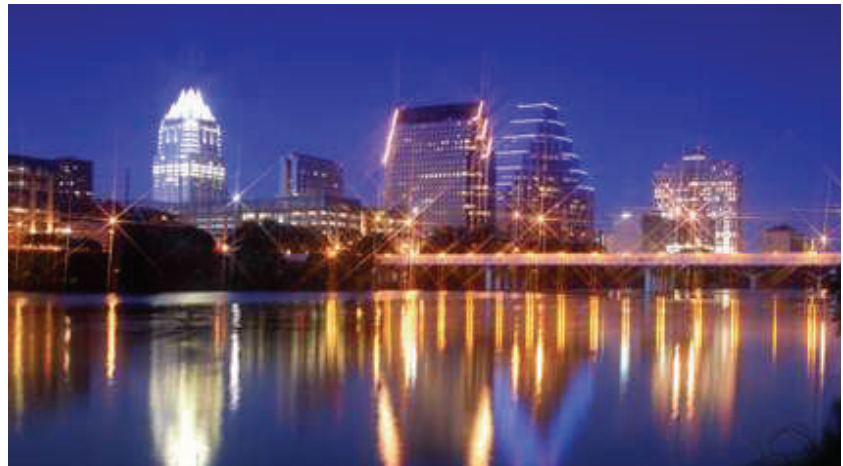

A chance to say hello and meet fellow attendees as a prelude to Monday's program opening.

Happy Hour

Monday, May 16th
5:00- 6:30 pm

Unwind at the end of our busy first day before heading out to dinner on your own.

Plus lunches, breaks and more!

IHS SPECTRUM Excellence Awards Celebration!

Gala Award Banquet Spotlights Outstanding Achievements in Information Management for EHS & Sustainability

The IHS SPECTRUM Excellence Awards honor organizations that demonstrate leadership in the use of advanced information systems and best practices to achieve environmental, health and safety and sustainability (EHS&S) business goals. Winners have been selected based upon their projects or programs having achieved major benchmarks of EHS&S performance during the 24 months prior to May 1, 2011.

Please be sure to join us for an evening of good music, food and fun as we congratulate our Award winners and find out who will win the top honor as Best of the Best. (The banquet is included in your conference registration.)

We will gather at 6 pm for cocktails. The doors open at 7 pm.

Media Sponsors for the IHS SPECTRUM Excellence Awards

IHS SPECTRUM 2011

Page 2

IHS SPECTRUM 2011 is the first-ever combined user conference for all of our EHS & Sustainability software solutions. We will begin by offering attendees visibility into our strategy and how it will guide the future direction of our solutions.

Advancing Decisions that Advance the World – Our Commitment to You

Scott Key, IHS President and Chief Operating Officer

IHS is dedicated to helping our customers drive critical processes and make high-impact decisions with speed and confidence. Our company is the leading provider of information for many vital areas that shape today's business landscape, including energy and power; design and supply chain; defense, risk and security, country and industry forecasting; commodities, pricing and cost; and environmental, health and safety (EHS) and sustainability. IHS is now the premier provider of software, services and expertise for EHS compliance and sustainability. Over the past four years, IHS has invested more than \$200 million in corporate acquisitions in order to provide our customers with the broadest, deepest set of solutions on the market today for Enterprise Sustainability Management. Take advantage of this unique opportunity to hear our executive leadership's strategies for the continued growth of IHS and how that will enable us to continue to do even more to help you and your organization achieve your business goals for 2011 and beyond.

Energy & Sustainability: The Role of Information in an Interconnected World

David Hobbs, IHS CERA Chief Energy Strategist

How did construction delays in China drive the price of oil up to \$150 per barrel? How do floods in Queensland force a trucking company in Idaho to consider layoffs? How could a European chemical company's product compliance issue impact regional energy consumption? We know that the global energy system is interconnected but it is often hard to appreciate what this means in practical terms for our own companies and communities. Decision-makers need to understand the big picture in order to recognize potential risks and opportunities. Join us as we explore the vital role of energy information in ensuring sustainability for organizations from every industry sector. Hear about how energy issues are closely intertwined with environmental, health and safety challenges. Learn about powerful new information management synergies and long-term investment strategies that will help your enterprise thrive in a rapidly changing world.

*Woody Ritchey
Vice President
IHS EHS & Sustainability*

Partnering with You: The Emergence of Enterprise Sustainability Management

*Scott Lockhart
Vice President
IHS EHS&S Solutions*

Our world and our profession are being transformed. Market forces are driving change and IHS is playing a leadership role. Our mission is to become your trusted partner as we enter a new era by providing a full spectrum of information solutions for Enterprise Sustainability Management that power growth and value for your organization. IHS has already brought together the most powerful array of EHS & Sustainability (EHS&S) software, services and expertise on the market but we know that our success depends upon our ability to continue working closely with our customers. You are now part of the largest software user community in our industry – by far – representing thousands of organizations around the world that are leading the way in the practical use of advanced information systems and best practices for EHS&S. This conference is our first chance to get together in person and we will kick it off by sharing our perspective on the evolution of Enterprise Sustainability Management solutions as well as IHS strategies for enhancing our service to your organization.

1:30 pm – Monday May 16

Products: ALL

PLENARY Product Management Outlook: Understanding the IHS Solution Roadmap and Our Vision for the Future

Jeff Ladner, IHS

IHS has brought together the premier EHS and sustainability software solutions on the market and we are fully committed to continuing their development. As part of the IHS portfolio, all of our major software families are now backed by an established global, full-service organization. The paths forward for these critical systems are now being brought into alignment by IHS to optimize their effectiveness both individually and collectively. In this session, the leaders of our Product Management team will offer a closer look at the IHS roadmap and vision.

2:30 pm – Monday May 16

Products: ALL

Sustaining Your Investment in EHS & Sustainability Systems with Implementation Best Practices

Carrie Tuosto, IHS

Guest Speaker: CH2M HILL

Technology experts agree that nearly half of enterprise software implementations fail to achieve the desired objective of streamlining and simplifying EHS compliance and sustainability management. Typically, system implementation failure can be attributed to the lack of a proactive implementation plan or a flawed change management strategy. This presentation will look at roles and responsibilities that should be accounted for when sustaining your EHS&S system deployment. IHS and CH2MHill will provide insight on the types of activities we have seen our customers use to ensure that they are getting maximum value from their EHS&S information systems.

3:45 pm – Monday May 16

Products: ALL

Leveraging Process Data for Operational Efficiency and Data Reliability

Lisa Thompson, IHS

One of the toughest management challenges facing many organizations is that of collecting complex, high-volume EHS data including air emissions, water discharges, energy consumption and more. This is especially true for organizations that have numerous data collection points or operating parameters. Data must be gathered efficiently while also assuring its quality and verifiability. IHS Essential Process Data Manager reduces risks and costs by automatically collecting EHS data from various sources -- such as process data historians, LIMS, DCS, PLCs, analyzers, etc -- at one or more facilities. See how this tool funnels data directly into Essential Suite and hear about plans to extend that capability to other IHS software for EHS&S.

9:15 am – Tuesday May 17

Products: ALL

PLENARY Panel Discussion: Exploring the Meaning and Boundaries of Enterprise Sustainability Management

Dorney Douglass, IHS

Information management in our field is evolving rapidly but where exactly is it headed and what does it mean to your organization? Core aspects of the Enterprise Sustainability Management movement seem self-evident but others are open to interpretation. Hear a panel of authorities -- representing system users, solution providers and independent industry analysts -- offer their perspectives on the sweeping changes that are now underway. Join us and share your thoughts during the interactive "open mike" discussion.

10:30 am – Tuesday May 17

Products: ALL

Achieving Global EHS Compliance with CyberRegs and ART

Guest Speaker: Citation Technologies

Companies invest in an EMIS to reach a goal of EHS compliance. Once installed many companies do not achieve the level of success expected. This lower compliance achievement can frequently be caused by a lack of understanding as to what laws and regulations actually apply to a site. In addition, even when an applicable requirement is known, what has to be done to comply can be difficult to ascertain. The Applicability Review Tool (ART), together with CyberRegs, solves these issues, and when integrated into an EMIS, achieves what a company initially sought, COMPLIANCE.

11:30 am – Tuesday May 17

Products: ALL

Upgrade or Bust! Expert Insights into the Value of Staying Current on Your EHS&S Software

Todd Ingersoll, IHS

Why is it so important to make sure your organization is using the latest version of a given software product for environmental, health and safety and sustainability (EHS&S)? This presentation by one of the senior members of our development team will highlight the compelling technical and business reasons to upgrade to the latest version of IHS solutions.

1:30 pm – Tuesday May 17

Products: ALL

Enterprise-level EHS&S Software Implementation Lessons Learned: Insights from Real-World Experience

Mike Easley, IHS
Guest Speaker: ERM

This session will explore the top 10 variables that directly influence the success of an enterprise EHS and sustainability software implementation project, as illustrated through various case studies. It will also touch on some of the leading edge practices in project management, like agile project management, that can help to manage these variables.

2:30 pm – Tuesday May 17

Products: ALL

Utilizing Operational Risk Management Practices to Create Business Value

Organizations around the globe are subject to a wide variety of policies, regulations, standards, and specifications that require operational risk management. They need to find better ways to identify, analyze, and mitigate a broad array of product, supply chain, security, and other operational risks. Find out how you can make an expanded operational risk management capability part of your comprehensive, enterprise-level strategy for EHS and sustainability.

LUNCHEON SPEAKER – Monday May 16, 2011

12:30 pm Monday May 16

Rethinking EHS Compliance in the New Normal

Simon Jacobson
Research Director, Manufacturing, Gartner

The current crop of EHS systems and architectures are ill prepared for the new era of information, efficiency, and resource optimization. While leading companies seek to understand the impact of their people, products and processes beyond core performance to compliance mandates, they are often halted by yesteryear's investments in inflexible and non-scalable systems. In order to keep pace with today's dynamic markets a radical rethinking of information integration is critical for not just core EHS management, but participation in future sustainability initiatives.

Simon Jacobson is responsible for Gartner's coverage of manufacturing operations. He researches and works closely with clients on current and future manufacturing strategy; IT and business process architectures, metrics, and provide insight and best practices and insights. He examines specific functional capabilities such as manufacturing execution, enterprise integration, operations intelligence, and quality management. Mr. Jacobson is frequently quoted in the press and presents often at industry events worldwide on such topics as Manufacturing 2.0, Environmental Health and Safety, and Global Quality

10:30 am – Monday May 16

Product: Essential Suite and opsInfo

Transforming Environmental Challenges into Business Opportunity – IHS Strategic Outlook for Environmental Compliance

David Cain, IHS:

Environmental compliance continues to be top-of- mind for EHS & Sustainability professionals, as well as C-level executives – driven by continuing complexity of regulatory reporting, potential cost and complexity of data management, and inherent risk of environmental incidents. Learn how these industry, regulatory and market drivers are shaping the challenges and opportunities in these areas, and how IHS is delivering solutions to better enable customers to manage these complex issues.

11:30 am – Monday May 16

Product: Compliance Suite, Essential Suite, opsInfo

Environmental Compliance Solution Strategy and Roadmap

David Cain, IHS:

During this session you will learn how the various business challenges and opportunities in this area are driving the vision behind each individual product within the IHS Environmental Compliance portfolio. We will outline each solution offering and outline our direction and related 2011 – 2012 roadmap for each.

IHS Essential Suite®

2:30 pm – Monday May 16
Product: Essential Suite

2011 Solution Enhancement Voting List Discussion

Marc Dillon, IHS

Participate in a discussion about Essential Suite customer priorities. In this session, we'll review the voting list and process for you, the customer, to communicate your business needs and priorities.

3:45 pm – Monday May 16
Product: Essential Suite

Latest Improvements to Essential Air – Improved Workflow for Emissions Management and Parameter Management

Paul Andrews, IHS

Learn about new Air module features in the recent Essential Suite releases that will both simplify and increase efficiency of emissions management and data collection functions. Workflow for management and collection of production data has been streamlined with several new functions. New simple and elegant wizards support modeling of equipment and calculation methodologies. Learn about new features on the Air module roadmap that will further streamline your emissions management processes.

10:30 am – Tuesday May 17

Manufacturer Focuses on Waste Reduction and Water Conservation to Minimize Environmental Impact, Maximize Efficiency

An international manufacturing company has recently been able to replace numerous legacy systems with one centralized platform that automates environmental audit processes and manages facility permits online. In the process, this industry leader has substantially increased the productivity of its EHS management team. In addition, implementation of the new system has also contributed to achievement of major corporate sustainability goals for reduced water consumption and cradle-to-grave waste management.

11:30 am – Tuesday May 17
Product: Essential Suite

Enterprise Platform Interoperability Fuels Enhanced Performance Management to Drive Operational Excellence

Guest Speaker: ERM

When senior executives and operations managers need to make decisions, they need access to critical EHS&S performance and business information from across the organization. They need data to be quickly and reliably collected and aggregated from multiple enterprise information systems and then presented in dashboards formats that are convenient and comprehensible. Find out how IHS is working with other top enterprise information technology providers to deliver flexible integrated solutions that enable organizations to readily monitor key performance indicators and manage their businesses more effectively.

1:30 pm – Tuesday May 17

Product: Essential Suite

FERC and NERC: Making Energy Reliability Compliance Work for You

Judy Coleman, IHS

Many companies must comply with requirements established by the Federal Energy Regulatory Commission (FERC) and North American Electric Reliability Corporation (NERC). Hear how one company is meeting its obligations by using Essential Suite software to monitor and drive critical work processes for self certification, data submittals, spot checks, audits, complaints, investigations, self reports, mitigation planning; and exceptions reporting. IHS is providing regulatory applicability documentation support and help assigning requirements to individual sites. The bigger value is the on-going documentation of tasks as they are completed rather than retroactively asking for documentation of task completion.

2:30 pm – Tuesday May 17

Products: Essential Suite, HMMS, opsInfo *

(*See concurrent "Dashboard Focus Group" p.8)

Waste Management Focus Group

Angela Wirick, IHS

Managing the quantity and quality of you waste data is an important aspect for planning, safety, waste characterization, cost, compliance, generator status and more. What are your company's drivers for managing waste? How well is your solution integrated with overall EHS&S performance: metrics, regulatory reporting, and sustainability goals? The IHS Product Management Team would like to hear from our customers about your challenges and needs and how well we are meeting those needs. Please join us in a discussion with your peers and our IHS experts to map out a next generation waste solution strategy.

3:45 pm – Tuesday May 17

Product: Essential Suite

IHS Developers' Insights: Leveraging Essential Suite Architecture and Functionality to YOUR Advantage

Todd Ingersoll, IHS

IHS continually extends its leadership position in the development of advanced information management solutions by doing two things at once. First, our team is always refining and enhancing our core products – for example, incorporating asynchronous processing into Essential Suite in order to enhance the usability and performance of both emissions calculations and task management. Second, our developers and domain experts are exploring ways to leverage Essential Suite even more effectively through simplified integration with other enterprise technologies. Join us to see a sampling of our latest innovations and a preview of what's next!

2011 System Enhancement Voting List Discussion for opsInfo

David Cain, IHS

Customers play a key role in voting their opsInfo enhancement priorities in the coming year. In this session, the enhancement voting list is presented, discussed, modified and refined. The initial list, which has been gleaned from the opsInfo customer enhancement request backlog, is the starting point for this interactive session in which all licensed opsInfo customers are encouraged to participate.

3:45 pm – Monday May 16

Product: opsInfo

IT Experts Forum: Survey of New Offerings and Opportunities

Randy Chadrapatla, IHS

This session is geared for technically-oriented opsInfo users. We take a deep dive into product implementation, system integration, technical roadmap, and best practices for scalability and performance. Come to this session ready to share your experiences, engage with IHS experts, interact with your peers, and help shape the opsInfo technical development agenda and plans for the future. Join in a discussion of the new web services API wrapping of opsInfo and how you can take applications and content integration at your company to a new level. Come and connect with opsInfo Connect.

10:30 am – Tuesday May 17

Product: opsInfo

The Successful 90-Day Implementation - How We Did It, Lessons Learned

Guest Speaker: DTE Energy and URS

This presentation discusses the "fast-track" that one company took to implement version 8 of the opsInfo system. The implementation included two primary "build-outs" -- opsAir with GHG and conversion of the old CEMS RW system and a capture of the legacy data. Foundational elements of opsWater and opsCompliance were included. The presentation will discuss the approach used to perform such an implementation, what benefits are gained and what elements are not. The presentation will be oriented for organizations that are planning their implementations or considering such an approach.

11:30 am – Tuesday May 17

Product: opsInfo

Metrics and Dashboards are Key to Fulfilling the Promise of Compliance, Transparency and Accountability

This session will introduce you to an innovative, customer-driven application of opsInfo. See how one of the world's largest oilfield services companies provides oil and gas industry companies with products and services for drilling, formation evaluation, completion, production and reservoir consulting. Experts will explain how opsInfo performance metrics and dashboard capabilities are enabling this global company to take Enterprise Sustainability Management to a new level.

1:30 pm – Tuesday May 17

Product: opsInfo

EHS&S Content Focus Group

David Cain, IHS

Much is being said about corporate sustainability but, we realize that an EHS&S system is only as good as the information it manages. The data you use must be sustainable, current and up-to-date if your programs are going to be effective. So what do you need to do to keep your opsInfo investment 'evergreen'? IHS is a world class provider of content. Come join us and share an interactive, out-of-the-box discussion on how we can reduce your

cost of ownership, streamline your work processes, unburden regulatory compliance and add value across the board.

2:30 pm – Tuesday May 17

Products: opsInfo, Essential Suite *

(*See concurrent "Waste Mgmt Focus Group" p.7)

Dashboard Focus Group

Dave Cain, IHS and Marc Dillon, IHS

Too many decision-makers are drowning in data! They need to see information more quickly and understand it's meaning more clearly. Dashboards are indispensable tools for monitoring key performance indicators, analyzing results and communicating with others. Join us as we discuss best practices and new directions.

3:45 pm – Tuesday May 17

Product: opsInfo

Final Voting Discussion

David Cain, IHS

This session is the capstone of the voting process. The updated ballot of the priority enhancements you would like to see in opsInfo will be presented based on interactive discussions on the first day of IHS SPECTRUM 2011. Let the voting begin!

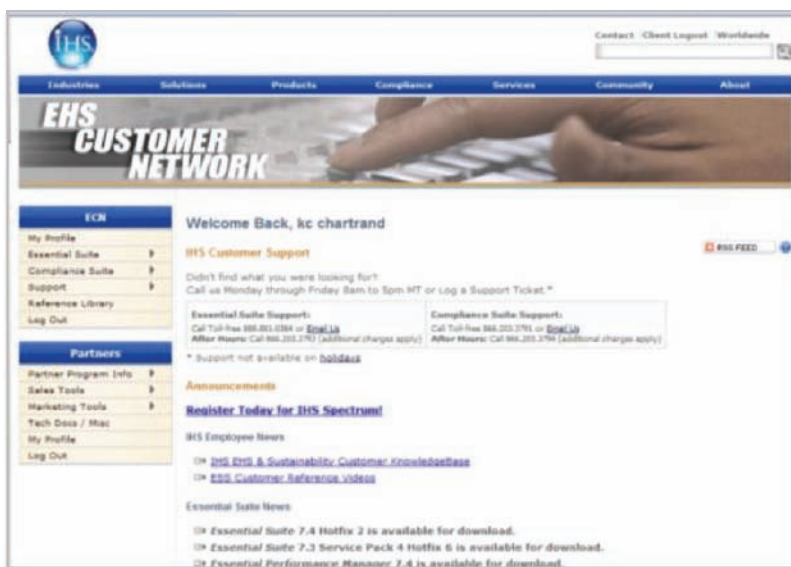

LUNCHEON SPEAKER – Tuesday May 17, 2011

12:30 pm – Tuesday May 17

EHS&S Customer Care: Working Hard To Make It Easy

Joni McHugh,
Senior Director
EHS&S Customer Care

The ECN (EHS Customer Network) is a new and powerful web-based tool that will allow our customers to take control of their tickets/issues reported to support. Come and see how you can make your voice heard, track your enhancements, issues, and upcoming events, and discover a valuable resource library. The ECN is your one stop source for information about all IHS environmental product offerings. See the information the customer care team sees and seamlessly interact with customer care/ support and product managers to facilitate dialogue and communication. Explore ECN to see ways to connect with other users to find new ways to network and to make the most of your software investment. Let your voice be heard!

The New Frontier for EHS & Sustainability - IHS Strategic Outlook for GHG and Energy Management

Mohamed Ali, IHS

Greenhouse gas management and reporting has been a hot topic for some time but, with the dynamic regulatory environment, along with the rising cost and growing uncertainty around energy – GHG and Energy Management are critically important issues now and in the future. Learn how these industry, regulatory and market drivers are shaping the challenges and opportunities in these areas, and how IHS is delivering solutions to better enable customers to manage these complex issues.

11:30 am – Monday May 16

Product: **ecoAsset Manager, Essential Suite, Environmental Strategy Planner, opsInfo**

GHG and Energy Management Solution Strategy and Roadmap

Paul Andrews, IHS

During this session you will learn how the various business challenges and opportunities in this area are driving the vision behind each individual product within the IHS GHG and Energy Management portfolio. We will outline each solution offering and outline our direction and related 2011 – 2012 roadmap for each.

2:30 pm – Monday May 16

Energy Companies Successfully Streamline GHG/Energy Reporting and Reduce Emissions with Enterprise-level Systems

Award-winning case studies confirm that companies are replacing numerous spreadsheets and homegrown applications with enterprise-wide implementations of opsInfo software to assure greater transparency and accountability in carbon emissions reporting. As manual work processes are automated and simplified, these companies are saving time – generating reports in just a few days instead of weeks or months -- while simultaneously improving the accuracy and auditability of their emissions data.

3:45 pm – Monday May 16

Product: **Compliance Suite**

Refrigerant Compliance as Part of a Complete GHG/Carbon Strategy

Mark Harbin, IHS

Refrigerant Global Warming Potentials (GWPs) range from as low as 90 to more than 13,000 times per pound in CO2 equivalents. Many of the Ozone Depleting refrigerant replacements are high on the Greenhouse Gas (GHG) control list globally. Learn how to strengthen your existing refrigerant compliance program track and add all refrigerant emissions to your carbon accounting program. Learn how to cope with upcoming GWP state and federal rules for GHG refrigerants and make the proper refrigerant choices now and in the future.

10:30 am – Tuesday May 17

Product: **Environmental Strategy Planner, opsInfo**

Environmental Strategy Planner Tool Utilizes Blend of Internal and External Information Content

Mohamed Ali, IHS

IHS is developing a suite of tools and capabilities that companies can use to optimize their EHS&S performance. Strategic planning takes a big step beyond traditional regulatory compliance by taking operations data, enriching it with benchmarking and market information, and stepping users through a planning process that helps them achieve real business advantage. In this session, Environment Strategy Planner for Carbon Management is introduced, demonstrated and discussed.

Meeting the Challenge of EPA's GHG Mandatory Reporting Requirements

Paul Andrews, IHS
Guest Speaker: ERM

Greenhouse Gas management and reporting has been a hot topic for some time. But, with the regulatory climate heating up, particularly EPA's Mandatory Reporting Rule (GHG MRR), this is a session you don't want to miss. The launch of GHG MRR has been challenging for everyone involved. Come to this session to share your GHG reporting experiences, understand the downstream ramifications and likely changes, learn about IHS investment and plans in this rapidly evolving and critically important area. IHS will share a preview of GHG MRR reporting capabilities available to opsGHG and Essential Suite customers.

GHG Allowance and Credit Portfolio Management with ecoAsset Manager

Mohamed Ali, IHS

In the continuum of GHG management best practices, the natural progression beyond emissions management and reporting is to strategically manage emissions program allowances. Learn how ecoAsset Manager can be applied to GHG programs around the world, including the Regional Greenhouse Gas Initiative (RGGI) and the EU Emissions Trading Scheme (ETS) – and how features like auditable inventory and transaction records, accounting and trading support, and automated registry reconciliation can deliver increased value to your GHG management goals.

Trends in Energy & Carbon Data Sharing within Supply Chains to Reduce Risks

Guest Speaker: Groom Energy

Companies are responding to more requests from their top customers for data pertaining to energy and carbon management and developing sustainability assessment programs for their suppliers. The need for more efficient, more transparent, and safer supply chains is driving increased exchange of sustainability data -- including sustainability of operations and products, energy efficiency, goals, and governance. Hear this independent analyst explain: how energy and carbon issues manifest differently across the industry value chain; elements of a successful supplier assessment program; how companies are handling information requests (sometimes up to 300 per year); and the attributes of successful centralized data processes and systems.

INDUSTRY BREAKFAST MEETINGS – 8 am, Tuesday May 17

Oil & Gas

Utilities

Manufacturing

These are Just a Few of the Industries We Serve with IHS Software for EHS & Sustainability

We Have Worked in These Industries for Decades. We Understand That Each One Faces Its Own Distinctive Compliance and Sustainability Challenges. Help Us Learn and Do More.

Join us for a working breakfast meeting with your peers to discuss shared interests and business priorities. Bring your colleagues, your questions, your suggestions and your appetite to this gathering. We look forward to hearing your thoughts about the business and information management issues that are most important to your industry and how IHS can help you successfully manage those challenges.

Facilitators for these meetings will include IHS industry experts as well as our implementation partners:
ERM, CH2M HILL, T3, E2 ManageTech, URS, Tetra Tech

Moving to a Proactive Approach - IHS Strategic Outlook for Health & Safety Compliance and Operational Risk Management

John Mercadante, IHS

Leading organizations are moving to implement more proactive approaches to areas such as incident management, behavioral-based safety, management of change, and analysis of key performance indicators as part of a holistic operational risk management approach. Learn how these industry, regulatory and market drivers are shaping the challenges and opportunities in these areas, and how IHS is delivering solutions to better enable customers to manage these complex issues.

Energy Industry Leader Standardizes Management of Change Process

Guest Speaker: CITGO

Energy industry leader's new Management of Change (MOC) process facilitates the use of best practices, and standardizes languages, terminology and units of measurement across the enterprise. This session will describe how this process ensures that revised policies, regulations, or personnel can be implemented smoothly without any safety or environmental compliance incident. The presentation will also cover the pivotal features of MOC in helping this company maintain its industry-leading low incident rate.

IMPACT ERM v6.0 – A Detailed Review

Kevin Jurica, IHS

IMPACT v6.0 is a significant release for the IMPACT product line. We have worked with numerous customers to make substantial improvements to various modules and we are excited to share them. The Assessment, Finding and Action Item modules have been revamped to allow customers to configure these modules to better fit their business process. A new Transportation Consequence module fully supports different modes of transportation (vehicle, rail, air, marine). The new Customer Defined Consequence allows customers to define a new consequence type with workflow and action items. A new Risk Control Framework enables customers to capture hazards and controls for Risk Assessments and JSAs. Various configurability

enhancements allow customers to link Assessments to Incidents/Assessments to support new business processes (e.g. Quality Review). Customer defined edit pages allows customers to enable new business processes (e.g. Incident Alert). Navigation has been enhanced to reduce the number of clicks and to make relevant information more accessible.

Using Behavior-Based Safety Approach to Drive Performance Improvement

Guest Speaker: ExxonMobil

A vital component of a successful safety program includes leveraging data to facilitate the implementation of your Behavior-Based Safety process on a continual basis. The session will review various noteworthy correlations between the numbers indicating implementation improvement and the end safety results. The speaker will share examples of key leading metrics used in his organization to monitor the health of the program, share the results with the entire organization and support the continued use and improvement of the program.

Putting Lagging Indicators in the Rear View Mirror with Broadly Applicable EHS & Sustainability Process-based KPIs

Joe Stough, IHS

Some Energy companies have been shifting their focus away from the standard incident-based metrics toward a set of “leading” management KPI’s which are drawn from the organizational treatment/execution of QHSE business processes. We will review the collaborative “research and analysis” process which has revealed these leading metrics. We will show how combining a large global data set with some fundamental statistical methods has resulted in finding the most meaningful KPIs.

Designing IMPACT Scenarios and Bundles to Support Corporate Data Requirements

Guest Speaker: Chevron

Find out how IMPACT Scenarios and Bundles can help support corporate data definitions and requirements while adding business capabilities so the OE metrics team can focus on proactive analysis and loss prevention. Reporting examples will include lagging metrics such as Total Recordable Injury Rates (TRIR) and Day Away from Work Rates (DAFWR) and performance metrics: solution timeliness and draft reports. Learn to report data out using multiple sources and have the same results: i.e. Corporate reporting from the Data Warehouse vs. Chevron Downstream’s instance of IMPACT and their Management Reports. The session will also explain Chevron’s use of the LI/NLI (Loss/Near Loss Investigation) Process.

IMPACT Math™ in 2011: New Research Findings, New Business Benefits

Joe Stough, IHS

After gathering a large data set in 2010, we cleansed the data to ensure an effective run of our analytical process. Through this process, we calculated more than 70 leading metrics and produced benchmark (quartile) calculations for each metric. In addition, we used statistical methods to establish an “index” that includes a mix of the six metrics that collectively predicted top performance – i.e. called the “IMPACT Index”. The deliverables from this research will help customers identify areas of strengths and weaknesses, which is knowledge they can use to target efforts / establish KPI’s to drive improved HSE performance – the ultimate purpose of IMPACT Math. In addition, these more rigorous iterations of analytics stand a good chance to greatly strengthen the predictive ability – and thus the performance improvement power and ultimate business benefit – of the IMPACT Index and the overall IMPACT Math program.

3:45 pm – Tuesday May 17(Second IMPACT Track)

Reducing Safety Incidents - Use Your Data To Empower Your Organization

Kyra Sharp, IHS

Learn how to utilize the reporting features already available to you in your Safety solution. We will explore different methods of completing ad hoc queries and learn how this data can be provided to upper management as a way to show where high risk areas exist allowing you to review your organization and begin to reduce your incidents.

CUSTOMER CARE WORKSTATION LAB

IHS Experts Answer YOUR Questions and Help You Try New Approaches in Real-Time

As one of the most popular aspects of our past user conferences, the Customer Care Workstation Lab is a flexible, friendly venue for meeting face to face with IHS product managers, trainers and technical staff. Our team will be situated at a group of workstations, ready to field your questions about IHS EHS&S software.

Don't miss this opportunity for a one-on-one consultation plus the chance to try out new technologies and techniques – working closely with IHS experts in an informal setting.

There is no fixed agenda or schedule, though you can arrange appointments with individual experts if you need specialized assistance. We look forward to focusing on your needs and interests so you get the answers you need.

The Customer Care Workstation Lab will be open all day Monday, May 16th and Tuesday, May 17th.

Effective Chemical Management in the Era of REACH – Challenges and Opportunities for Global Enterprises

Jeremy Johnson, IHS

In June 2007, REACH entered into force and ushered in a new era in Chemical Management – introducing significant changes in the way chemicals are regulated and how hazardous substances are identified, assessed and managed. Following REACH, other regulatory reforms and the growing sustainability movement have continued to increase focus on hazardous substances used in the workplace and found within products. So too have demands from shareholders, consumer, non-government organizations (NGO) and customers for greater quantification, reporting, and visibility to chemical management, ultimately raising discussion from the facility-level to C-level within companies. Learn how leading companies in process and discrete industries are changing the way they manage chemicals used in their operations and products to

ROI of Regular Physical Inventories

Linda Smith Copic, IHS

The most critical foundation of any compliance initiative is complete, current and accurate data. For successful chemical management, that means having an accurate physical inventory and corresponding SDS for all products that require one. Conducting regular inventories, while critical, can be time consuming and divert resources from other EHS management activities. Learn how physical inventory service from IHS has helped companies complete regular inventories, maintain currency and completeness of SDS data and strengthen their compliance position – without the loss of productivity and diversion from other activities.
