US Construction

- The **US Construction Quarterly Briefing** delivers detailed written analysis and complete historic and forecast data for the national construction market. Our written analysis highlights recent events and key drivers and how they affect the U.S. construction market. The forecasts are linked to a wide range of specific drivers from our U.S. macroeconomic, consumer, and industry models.

- The **US State and Metro Construction Quarterly Briefing** provides 15-year construction spending forecasts for each of the 50 states and over 360 metropolitan areas. Each quarterly report includes a topical article and commentary on recent events and trends influencing the market. Summary pages are included for each of the 50 states and 100 MSAs. Each summary page contains a series of tables and graphics designed to provide a quick, easy-to-use snapshot of each market. A list of major construction projects is also included.

- The **US Construction—Infrastructure Focus** provides clients with detailed national- and state-level coverage of the infrastructure sector. The executive summary covers significant developments in governmental legislation, and events and trends critical to the industry. From airports to wastewater plants, pavement to bridges, data spreadsheets provide detailed 15-year spending forecasts for multiple infrastructure concepts for each state.

### 30+ Building Types

- Amusement
- Commercial (five types)
- Communications
- Conservation and Development
- Educational (two types)
- Government Buildings
